

BIOFEST MERAKI 2

It's about Biomaterials –
Fungi – Circularity

**22–25 April
2026**

Thyrea
BioFabLab,
Astros, Greece

This knowledge-sharing event is especially around topics of Biomaterials, Fungi, and Circularity, and follows up on an initial [Fungal Themed Biofest](#), which helped launch the Thyrea BioFabLab back in October 2023.

We invite you to help shape this gathering. With an 'un-conference' format, we are moving away from rigid presentations in favor of hands-on exploration and fluid conversation. Do you have a biomaterial experiment to showcase, a fungal cultivation technique to teach, or a circular system prototype to test? We would like workshop facilitators, informal lightning-talkers, and active participants ready to get their hands dirty. Join us to co-create a space where community biology meets research action! Bring your projects, your questions, and your mycelia or spores; and let's grow this network together.

This time we plan to include a local event for the www.gov4all.eu soil mission, so if anyone is a soil expert, we seek your expertise for the benefit of both the local community and farmers everywhere.

We all very much look forward to your contributions for this edition!
Viva Open Science and Participatory Research!
